DETAILED ACTION

Allowable Subject Matter

1. Claims 1, 2, 3, 6-8, 10, and 11-13 are allowed. **Regarding claim 1**, the prior art does not disclose or suggest the combination of, inter alia, "a direct current coupling circuit connected to an output of the differential amplifier; a band pass filter configured to allow only signals having a frequency band near to internal impedance voltage signals to be passed; a A/D converter for converting analog signals into digital signals, wherein the analog signals include alternating current signals flowing into the battery cells, internal impedance voltage signals obtained from an output of the direct current coupling circuit, and direct current voltage of the battery cells obtained from the output of the differential amplifier; and a central processing unit (CPU) configured to compute internal impedance values by obtaining output signals of the A/D converter." **Claims 2, 3, and 6**, claims depend upon claim 1.
2. **Regarding claim 7**, the prior art does not disclose or suggest the combination of, inter alia, "storage batter cell terminal voltages are connected to non-inverting and inverting input terminals of a high input common mode voltage differential amplifier, negative constant voltages generated by a reference constant voltage circuit are connected to an offset terminal of the differential amplifier, an output of the differential amplifier is converted to A/D values through a DC filter circuit for eliminating noise." **Claims 8 and 10**, claims depend upon claim 7.
3. **Regarding claim 11**, the prior art does not disclose or suggest the combination of wherein "(i) analog signals are connected to multiplexer circuit input channels of an

analog to digital converter circuit (ADC), (ii) said analog signals are input to ADC circuit by channel select signals from a CPU output, and (iii) said analog signals comprise: direct current voltage signals of storage battery cells received as an output of a high input common mode voltage differential amplifier; internal impedance voltage signals obtained from a direct current coupling circuit connected to the output of the high input common mode voltage differential amplifier; and alternating current signals flowing into the storage battery cells." **Claims 12 and 13**, claims depend upon claim 11.

Response to Arguments

4. Applicant's arguments, see remarks, filed 5/22/09 with respect to claims 1-3, 6-8, and 10-13 have been fully considered and are persuasive. The rejection of claims 1-3, 6-8, and 10-13 has been withdrawn.
